A
favoured by high exposure
favoured by low exposure
Species departure, $(N_i - N^*)/N^*$
B
simulated total
change in squared species departure
Total departure, $\Delta N_{tot}/N^*_{tot}$
Time step (shared exposure)
C
Simulated shared/independent CV^2_{tot} ratio, R
small-noise prediction, $R = c\,\sigma^2_{env}$
S = 2
S = 4
S = 8
S = 12
mechanism grids
ordering-test grids
floor contact
Small-noise prediction, $c\,\sigma^2_{env}$
